## BREATH ALCOHOL TECHNICIAN & TRAIN-THE-TRAINER COURSES

MEDI is offering a course of instruction in breath alcohol technician (BAT) training for those interested in becoming certified as a Breath Alcohol Technician or a BAT Train-the-Trainer. Training and certification are specific to the following Intoxilyzer breath alcohol testing instrument models:

Intoxilyzer 200 and 200D  
Intoxilyzer 240D  
Intoxilyzer 400 and 400PA

The course offered follows guidelines established by the U.S. Department of Transportation, Office of Drug Policy and Compliance in their publication, **BREATH ALCOHOL TECHNICIAN TRAINING: DOT MODEL COURSE**. The purpose of this training is to ensure that persons conducting breath alcohol testing of regulated workers perform services in a consistent and uniform manner. It is apparent that consistency and uniformity are essential during legal proceedings and add confidence in the testing process to persons subject to testing. This course combines both procedural training and tester proficiency on a specified breath alcohol test instrument. Instrument certification training is completed on a **full** single day. The course begins at 8:00 am and ends approximately at 5:00 pm. These times are suggested as reasonable approximations but may vary somewhat depending on specific requirements of individual participants.

Trainees must be prepared to complete certification training during a single day and satisfactory demonstration of competence includes a passing score (70% or better) on a required final examination. The training day is concluded when **all** trainees have satisfactorily completed procedural training, instrument training and the course written examination. **Please note** that the training day may go **beyond 5:00 pm** and trainees must be prepared for this possibility.

### WHAT YOU BRING TO THE COURSE

- One of the Intoxilyzer instrument models listed above for each two trainees. Note that it is necessary to have two persons assigned to each instrument during the training sessions. If you have an instrument and only one person to be trained, then perhaps you can enlist participation of someone from another source to join with you.
- At least one standard gas calibration cylinder for each two trainees, tygon tubing to gas cylinder interface (available from MEDI and at the course for \$9.00 if you do not have this)
- An appropriate regulator for each instrument used in the training.
- A sufficient number of mouthpieces to accommodate multiple tests for each trainee. (A trainee may reuse a mouthpiece for some of the training exercises).

### WHAT IS PROVIDED AT THE COURSE AND INCLUDED IN THE COURSE FEE

- Course presentation materials enclosed in a 3-ring binder
- Required examination
- MEDI Certificate of course completion and certification
- Certification as a BAT from CMI (the additional fee for this certification is included in the course fee)

- Catered lunch

## THE TRAIN-THE-TRAINER COURSE

The Train-the-Trainer course participants will complete the certification program described above along with an additional half-day training on the following day. Successful completion of this program qualifies a person to train BAT technicians to support their own company program. To qualify for this training, the participant's company must be prepared to comply with a training licensing agreement and a proprietary information agreement with CMI.

### COURSE FEES

#### Certification Course

(Full Day) Course Date and location to be determined.

Cost: \$325.00

#### Train-The-Trainer Course

(1 ½ Days) Course Date and location to be determined.

Cost: \$750.00

(There is a separate licensing fee with CMI of \$500.00. The agreement is for two years and there is an agreement renewal

fee of \$50.00. The CMI certification fee for each BAT trained is \$35.00.)
